Subject: **I need a detailed dashboard**

Good day,

We have a hotel dataset containing Resort and City hotel data from 2015-2017, our central interest is to get insight from the year 2016 under resort hotel during the summer period (July & August). Although we will need to see insight on other months too.

Our other focuses are cancellation level, average daily rate and revenue made compared to revenue lost on a monthly basis.

Below is the Excel file containing the data.

*Thanks.*

## Our Point of focus are:

**Hotel type:**

Resort

**Year:**

2016

**Period:**

July & August

**Focus measures:**

Cancellation level

Average daily rate

Revenue generated

Revenue lost

# Hotel Summer Booking Dashboard (Deep insight on July and August 2016)

Total Revenue Made by Revenue lost on a Monthly basis

There is increase in **revenue** in July and August but also **lost to cancellations**  
(\$987K) Were lost to **cancellation** in July and August

Avg daily Rate and Cancellations by Month

Good news the **Average Daily Rate** is higher in July and August with low cancellation.  
We have **high cancellation** in Jan. Mar & Nov

## Key Recommendation What can we do?

- We can over booked the summer month reservation with that we can reduce cancellations
- Focus more on the booking between 0-30 days during the summer period (July & August)
- Reducing the average daily rate might reduce cancellations

Cancellation by weekdays

**Higher cancellation** falls between Monday & Saturday

Avg daily Rate

Summer bookings within 30 days have **high cancellation**. it might be affected by the high **Average daily rate**

Cancellation Rate
